	Examiner Jerome Jackson Jr.	Art Unit 2815	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2815

Throughout the specification "nitride spacer 22" should apparently be --nitride spacer 23--. Correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7,9-13,15 are rejected under 35 U.S.C. 102(b) as being anticipated by Noguchi '525.

Noguchi shows in figure 14 and in other figures a MOS transistor including a gate electrode 1, a gate insulating layer 2, a semiconductor substrate 17, a spacer 8", a lightly doped s/d extension 13,14 comprising a raised epitaxial layer bordering the bottom of the spacer, a heavily doped s/d region 15' next to an outer edge of the spacer, and a silicide layer 15. Claim 1 is anticipated. Claims 2 and 5 are rejected as the epitaxial material may be SiGe or SiGeC (col.9 lines 8-14). Claim 3 is rejected as the functional language does not structurally distinguish over the applied art which can function in the same manner. Claim 4 is rejected as p-channel devices are also disclosed by Noguchi. See column 15 lines 22-30. Claim 7 is rejected as the epitaxial layer of Noguchi is in the same range of "about". Claim 9 is rejected as the ldd regions

Art Unit: 2815

13 and 14 have a higher doping than the well 7 and a lower doping than s/d regions 15'.

Claim 10 is rejected as the epitaxial layer is below and next to the sidewall spacer in Noguchi. Claims 11-13 and 15 are also rejected as above.

Claims 6, 8 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Rodder '091, Lee '973, and Oowaki '165 are relevant art.
